

DuBose Strapping Titan HKE

Manual Seal-less Combination Tool
For Regular Duty and High Tensile Steel
Strapping

- The lightest tool in its class.
- Easy Strap application.
- Tensioning, Sealing and Cutting in two easy steps
- “No seal joint” Technology.
- Easy wear part replacement.

Titan HKE Manual Combination E-Series Tool

Lightweight, heavy duty tool for easy and efficient strapping.

Use the Titan HKE steel strapping tool to apply steel strapping, without the use of metal seals. The functions of tensioning, sealing and cutting of strapping are accomplished with one, easy to use tool, resulting in a seal joint that is stronger than joints made with standard metal seals.

The new HKE tool is the result of constant development of the Titan "No-Seal-Joint" technology for strapping tools. Weighing less than 8 lbs., it is the lightest available strapping tool, which means easier and safer operation for vertical and horizontal strapping.

The HKE is a durable tool that will provide years of reliable service. Sealing occurs by means of a rocking punch mechanism, so just 1/3 of the seal is made at a time. This means less physical power is required for actuation, and less wear of the mechanical parts. Therefore, the HKE is the only tool in its weight class to work well with .025" thick high tensile strapping.

The sealing mechanism of the E-Series Tool

The genuine Titan "No-Seal-Joint"

Prevents injuries: The uniquely shaped strap end leaves no sharp edges.

Technical data	Strapping tool HKE
Seal:	Titan "No-Seal-Joint"
Steel strap grades:	Regular Duty and High Tensile strap
Strap width:	1/2, 5/8 and 3/4 inch
Strap thickness range:	.015 to .025 inch
Strap tensioning:	Manual
